☒ Responsive to communication(s) filed on Feb 22, 2000

☐ This action is **FINAL**.

☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.

A shortened statutory period for response to this action is set to expire 3 month(s), or thirty days, whichever is longer, from the mailing date of this communication. Failure to respond within the period for response will cause the application to become abandoned. (35 U.S.C. § 133). Extensions of time may be obtained under the provisions of 37 CFR 1.136(a).

Disposition of Claims

☒ Claim(s) 1-24 is/are pending in the application.

Of the above, claim(s) _____ is/are withdrawn from consideration.

☐ Claim(s) _____ is/are allowed.

☒ Claim(s) 1-24 is/are rejected.

☐ Claim(s) _____ is/are objected to.

☐ Claims _____ are subject to restriction or election requirement.

Application Papers

☐ See the attached Notice of Draftsperson's Patent Drawing Review, PTO-948.

☐ The drawing(s) filed on _____ is/are objected to by the Examiner.

☐ The proposed drawing correction, filed on _____ is ☐ approved ☐ disapproved.

☐ The specification is objected to by the Examiner.

☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. § 119

☐ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d).

☐ All ☐ Some* ☐ None of the CERTIFIED copies of the priority documents have been
☐ received.

☐ received in Application No. (Series Code/Serial Number) _____.

☐ received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

*Certified copies not received: _____

☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).

Attachment(s)

☒ Notice of References Cited, PTO-892

☐ Information Disclosure Statement(s), PTO-1449, Paper No(s). _____

☐ Interview Summary, PTO-413

☐ Notice of Draftsperson's Patent Drawing Review, PTO-948

☐ Notice of Informal Patent Application, PTO-152

--- SEE OFFICE ACTION ON THE FOLLOWING PAGES ---

Art Unit: 2776

DETAILED ACTION

1. This action is responsive to communications: CPA filed on 2/22/00.
2. Claims 1-24 are pending in the case. Claims 1, 17, 21 are independent claims.
3. The objection of claim 1 under 35 U.S.C. 112, second paragraph, as being included a misspelled word has been withdrawn in view of the amendment.
4. The rejections of claims 1-3, 17-18, 21-22 under 35 USC 103(a) as being anticipated by Nakajima have been withdrawn as necessitated by the amendment.
5. The rejections of claims 4-12, 16, 19-20, 23-24 under 35 USC 103(a) as being anticipated by Nakajima in view of Person have been withdrawn as necessitated by the amendment.
6. The rejections of claims 13-15 under 35 USC 102(b) as being anticipated by Nakajima in view of Person and further in view of Microsoft have been withdrawn as necessitated by the amendment.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2776

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

8. Claims 1-3, 17-18, 21-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima et al. (US Pat No. 5,659,791, 8/19/97) in view of Khoyi et al. (US Pat No. 5,421,015).

With respect to independent claim 17, Nakajima discloses:

--the obtaining information from the external application program in accordance with the result of the analysis (the scrap object is integrated into a destination document or transferred between applications via a clipboard after the information is selected to be extracted from the document (col 2, lines 20-43; col 1, lines 46-61))

--the creating an information object in accordance with the obtained information and attribute information which includes object ID, object type and information type (the encapsulating of the selected information into an object is created automatically by the system to encapsulate the

Art Unit: 2776

selected information in response to the extracting and that is stored in the memory (col 6, lines 25-28); an object is a combination of data structure that hold *attribute data* and *functions that act upon the attribute data* (col ²~~6~~, lines 64-67); the giving of a name for an object for *referencing the object* (col 6, lines 64-67), which means each object has an ID; the *recognizing of the information type to handle the reintegration of an object* (col 5, lines 55-58))

Nakajima does not disclose the priority for showing of objects, time stamp, object link which are able to be modified after being created as an information object.

Khoyi discloses the object catalog including the object table and link table (figure 5). The object table includes object identifiers, object type and object location (figure 6). The link table includes link ID, link type, parent object identifiers, child object identifiers ...(figure 7). Khoyi also discloses how the data objects are linked together (col 3, lines 12-20; col 43, lines 1-11) and the ability of editing of the moved or copied objects (col 43, lines 66-67; col 44, lines 1-5).

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to have combined Khoyi into Nakajima to have the information objects, for user selecting of information, which include object ID, object type, object link and the ability of modifying objects after created. As disclosed, the attribute information includes object ID, object type and object link, parent object ID and child object ID which are object ID of next object, thus motivating the including of the priority for showing and time stamp, which are other information data related to the object.

Art Unit: 2776

In addition, the fact that Nakajima shows that the information is selected as requested, transferred and integrated into a document of another application implies that the system can analyze an event for selecting information as well as create an information object as desired.

With respect to claim 18, which is dependent on claim 17, Nakajima discloses that the information is selected to be extracted from the document and transferred to a clipboard provided in the operating system using the scrap object. The selected information then is transferred from the clipboard to an application (col 1, lines 55-62). Nakajima also discloses that after the scrap object is created, it may be subsequently integrated into a document, including the document from which it originated (col 4, lines 53-56).

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to have applied Nakajima because Nakajima provides the clipboard for transferring selected information between applications which include the original application and the application different from the original application.

Claim 21 is for a computer readable program code to perform the steps in claim 17, therefore rejected under the same rationale.

Claims 2 and 3 are the system for performing the step in claim 18, therefore rejected under the same rationale.

Art Unit: 2776

Claim 22 is the program code means for performing the step in claim 18, therefore rejected under the same rationale.

With respect to independent claim 1, Nakajima discloses, as in claim 17, the information is selected, transferred and integrated into another document using a scrap object as a vehicle for interapplication transfer of information (col 3, lines 25-35). Nakajima also discloses the operating system provides code for a clipboard and code for implementing a user interface (col 2, lines 55-60). Nakajima further discloses the role of the mouse and the operating system in the drag-and-drop mechanism used to create a scrap object in which the movement of the mouse, the depression and the release of the mouse button, each constitutes an event that is translated by the operating system into a message, and the operating system post most of the mouse messages into a message queue for a currently executing application program (col 3, lines 25-40).

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to have employed Nakajima because Nakajima shows the abilities of selecting, transferring and integrating information between applications in which the operating system plays an important role in incorporating with the mouse to translate events entered into messages to execute the requests to the applications.

In addition, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to have combined Khoyi into Nakajima since Khoyi provides the link feature and the ability of editing of copied data as mentioned in claim 17 above.

Art Unit: 2776

9. Claims 4-12, 16, 19-20, 23-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima and Khoyi as applied to claim 17 above, and further in view of Person (*Using Windows 3.1*, 1993).

With respect to claim 19, which is dependent on claim 17, Nakajima and Khoyi do not disclose the editing of the contents of the selected information objects after created.

Person discloses the editing the contents of the embedded objects in a document (p.235, 236, 521, 522).

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to have incorporated Person to Nakajima because Nakajima shows the transferring selected information objects and Person shows the editing the selected information objected after created.

With respect to claim 20, which is dependent on claim 17, it was well known that a user can (a) move an object from one location to another by using the drag-and-drop mechanism, (b) delete an object by highlighting the object and pressing the delete key, (c) change an object by highlighting a portion of the object and pressing the delete key to remove that portion, (d) to create a new information object by selecting a portion of an object and save it under a different name. In addition, Nakajima shows the combining objects when a scrap object integrated into another object of other document. Nakajima also discloses the class object that refers to a group of objects thus all scrap objects belong to the scrap object class have the same type of attributes and

Art Unit: 2776

functions (col 3, lines 1-12). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to have applied Nakajima along with the conventional features of a document processing system to perform the functions as claimed.

Claim 23 is a computer program code means to perform the functions of claim 19, therefore rejected under the same rationale.

Claim 24 is a computer program code means to perform the functions of claim 20, therefore rejected under the same rationale.

Claims 4-10 are for the means included in the system to perform the functions disclosed in claim 20, therefore rejected under the same rationale.

With respect to claim 11, which is dependent on claim 10, it was well known when a selected text or graphics is moved, the rest of the document is moved to maintain the relative location in the document.

With respect to claim 12, which is dependent on claim 10, the fact that a file subdirectory containing a plurality of files including the index file, if the index files is selected and deleted, the whole subdirectory is deleted, can be applied to the object group as claimed.

Art Unit: 2776

With respect to claim 16, which is dependent on claim 10, Nakajima does not disclose that an information object belonging to any one of information object groups and an information object which does not belong to any information object group are shown on the window by different ways. Person discloses the document including the information selected from different applications. The display of the whole document is different from the display of only the information from Microsoft Excel which are the graph and the table (page 208). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to have applied Person to Nakajima because Person shows the display of the combined document, including text and graphics, which is different from the document from Excel which includes only the graph and table.

10. Claims 13-15 rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima, Khoyi and Person as applied to claim 10 above, and further in view of Microsoft (*Microsoft Windows User's Guide*, 1992).

With respect to claim 13, which is dependent on claim 10, Nakajima, Khoyi and Person do not disclose the relationship of an information object in the information object group, when selected, is canceled.

Microsoft discloses that when deleting a link from an Cardfile object embedded in a Write document, both the link to the drawing and the drawing are removed from the document (p. 502).

Art Unit: 2776

With respect to claims 14 and 15, when two objects are selected and grouped, there is a hierarchical relationship created between the two elements in the group and, it was well known that if one element is selected and deleted, it is removed from the document.

Response to Arguments

11. Applicant's arguments filed 2/22/00 have been considered but are moot in view of the new ground(s) of rejection.

Applicants argue that Nakajima teaches that the information, a name and an icon are encapsulated when a portion of information is extracted from the original document. On the other hand, for the purpose of information extracting, the invention claims the information storing means for storing selected information and attribute information such as object ID, object type, information type, priority of showing, time stamp, object link and object ID of the next object.

In response, Examiner shows that Nakajima does teach the automatical creating of the encapsulating of selected information into an object in response to the information extracting, and that is stored in the memory (col 6, lines 25-28). When created, the object holds attribute data (col 2, lines 66-67).

Therefore, it does not matter that the attribute data of objects should be stored in an unit of the system before extracting of the information. The selected information object can be created automatically along with the attribute data of the object.

Art Unit: 2776

Applicants also argue that the encapsulated information is displayed using an icon. On the other hand, the invention claims that the drawing means for drawing an object based on the attribute information stored in the information storing means. For example, if the object type is "text", the text information is displayed instead of icon. If the object type is a "bit map", the image information is displayed instead of the icon.

It is not quite right since as taught by Nakajima, the selected information may be text, graphics or other kinds of data (col 1, lines 41-42) and the extracted portion of the document encapsulated in a scrap object should be reintegrated into a document in a manner that it looks like the original appearance (col 5, lines 48-54), which can be either text or graphics. That means text is displayed if the object type is "text", and image is displayed if the object type is "image".

The icon in Nakajima is just a symbol of the scrap object (col 5, lines 18-19). The icon is not displayed for the encapsulated information.

In addition, Applicants argue that the claimed invention is capable of relating objects to each other, editing objects and manipulating an object which relates to an object noted.

In response, Examiner provides Khoyi which discloses the linking among objects, the editing of objects as well as manipulating of an object as disclosed in claim 17 above.

Art Unit: 2776

Conclusion

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bannon et al. (US Pat No. 5,297,279, 3/22/94) teaches a system and method for database management supporting object-oriented programming.

Powers, III (US Pat No. 5,428,731, 6/27/95) teaches an interactive multimedia delivery engine.

Khoyi et al. (US Pat No. 5,261,080, 11/9/93) teaches a matchmaker for assisting and executing the providing and conversion of data between objects in a data processing system storing data in typed objects having different data formats.

13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cong Lac Huynh whose telephone number is (703) 305-0432. The examiner can normally be reached on Monday through Friday from 8:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Razavi, can be reached on (703) 305-4713. The fax number to this Art Unit is (703) 308-5403.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.

14. **Any response to this action should be mailed to:**

Art Unit: 2776

Commissioner of Patents and Trademarks
Washington, D.C. 20231

or faxed to:

(703) 308-9051, (for formal communications intended for entry)

Or:

(703) 305-9724 (for informal or draft communications, please label
"PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive,
Arlington, VA., Sixth Floor (Receptionist).
